Now in its third edition, this best selling full-color text is better than ever! Organized by body systems, this essential pathophysiology text is written specifically for allied health learners and as a reference for allied health professionals. This book is also ideal as a resource on basic diseases for anyone within the medical arena or lay community. It is designed to make difficult pathophysiology concepts easier to understand by using consistent organization, and includes pronunciations, boxed features, and full-color illustrations and photos. Chapters progress through a basic review of anatomy and physiology before introducing the most common diseases. Common diseases and disorders are presented consistently through description, etiology, symptoms, diagnosis, treatment and prevention headings.

Comprehensive enough

By the student

For the purpose intended (to introduce allied health students/professionals to essential pathophysiology) it is an excellent text. It isn't a book for med school, and it doesn't claim to be; it merely presents the basics in a readable fashion.

The prose is charming, making the information presented rather digestible!

The simple breakdown of "disease + description, aetiology, symptoms, diagnostic tests, treatment (and prevention)" make for a work that is easily useable as a reference for an allied health worker (medical herbalist, naturopath and so on). Such a structure also aids memorisation.

I feel that sometimes this book oversimplifies the 'general-science big picture' of content to a point at which the concept is misrepresented. An example - Figure 14.9 on page 292 - insulin is shown as stick-figure claws pulling glucose (here called 'sugar') into cells. Clearly not a major gripe, but is it too much to say 'insulin acts on the cell receptors opening channels which allow glucose to enter cells, thereby reducing blood glucose'?

I don't think so, given that allied health students are now put through the rigours of basic anatomy, physiology and biochemistry.

But, the negative could also be regarded as a positive, eliminating any daunting information which would otherwise be an impasse for the 'lay community'.

Side notes on developments in medicine and avenues for complementary medicine are an excellent and interesting addition to the text.

Diagrams and the available studyware program are useful too. Studyware has tests, crosswords and similar activities designed to help students familiarise themselves with the content. Occasional videos are also available with some chapters. These, too, are excellent additions to the text.

Overall, a substantial text that will be quite useful to any allied health practitioner! Highly Recommended!
