Passed the Test
By Christian Father
I found the book to be very well written and easy to understand. It worked well for me as the self-study type. What I have found with many computer books is that if they are written well enough you can easily teach yourself the material. I used this specifically for its intended purpose of preparing for the 98-367 Security Fundamentals exam. I just took the exam and passed with an 88. I managed to stay pretty even in all four levels of testing. Although 45 minutes is allowed for the test I finished in about 10 minutes.

One thing that the author may have done better is actually word the questions where we have to think a little more in depth. In essence, make them a little trickier. The practice questions were worded very straight forward. I found that on the test I had to think a little more in the way that they presented the question.
